Overview

Styles 2120 and 2122 feature tubular steel frames.

The chair features 2" thick molded foam over a plywood, flat seat panel. The back features foam covered plywood back panels fastened to the frame without visible fasteners.

7/8" square tubular frame is an all-welded frame by mig arc process with argon shield gas.

Powder coated finish begins with a five-stage cleaning process.

All of DPC's tubular steel stacking chairs have been performance tested and meet or exceed ANSI/BIFMA standards.

Features

The frame is fitted with the exclusive triple umbrella glide, ensuring easy movement over carpeted and hard surface flooring

The chairs can stack 12 high, freestanding.

Consult the Standard and Premium Metal Finishes for selection.
