Overview

Model # 5075 is a selection from the Astron Series.

The Astron series features unsurpassed comfort in banquet seating from the first moment one sits down through an all-day meeting or event. The seat is cushioned with three inches (3") of luxurious molded foam with a waterfall front for tension free leg support. Deeply contoured back panels support the user as they relax into the flexible back support system that automatically adjusts to one's movement.

While chairs will stack free standing up to 8-10 high their design expresses a more traditional look, not typical of banquet seating. The legs are one inch square (1") extruded aluminum with a contoured surface powder coated. Consult the Standard and Premium Metal Finishes for selection.

Features

Stacks 8-10 high free standing.

Powder coated aluminum frame.

Nickel plated triple umbrella rubber cushion glides to ensure years of maintenance free service on all floor surfaces.

Weight activated action back.

Seat & back panels are molded solid plywood with T-nut fastenings for contract use.

*When ordering hand trucks for this series specify #20/5075.
